Hello Randall,

I believe we met back in January at the Liberty Fibers Site.

While observing site operations today, scrap metal recovery was discovered at the pipe rack that runs onto the neighboring Alumasal, LLC, property. When questioned, the foreman said scrap was being recovered from within a five story building on the property as well.

My concern is that asbestos insulation has crumbled and fallen onto the ground below the pipe rack they are working on. I would like to know if you have been notified regarding the demolition work inside the building, as all it appears that the workers have been told is to stay away from asbestos and that fiberglass is fine. I am not sure they know the difference.

Thanks,
